

Please accept this as my opposition to to the proposed RM-10352 change to the bandplan for 160 meters. This change is unnecessary and unfair to phone operators working above 1.843 Mhz as CW and narrowband modes are still allowed above 1.843 Mhz. As an active user of the band since the late 1980's I see no reason to change the current voluntary band plan in the interest of the small per centage of ops who are pushing for it.

Sincerely,

Mark F. Zegel, W4MZ
